POSTDOCTORAL POSITIONS are available to study different aspects of mammalian organogenesis, with a particular focus on the cellular and molecular mechanisms controlling the development of the eye and the lymphatic vasculature using available mouse models. Highly motivated individuals who recently obtained a PhD or MD degree and have a strong background in molecular and developmental biology are encouraged to apply. Interested individuals should send their curriculum vitae, a brief description of their research interests, and the names of three references to:

Guillermo Oliver, PhD
Member
